UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

FOREWARD

"Nevada's ASCS Farm Programs" is published each year by the Nevada State ASC Committee. The brief narrative and statistical data is provided so the reader can gain a better understanding of the important roll that ASCS programs perform in conserving our soil and water resources, providing increased agricultural income and assisting in the stabilization of consumer food prices.

The County ASC Committeemen are to be commended for their fair, effective administration of these ASCS farm programs. Our county executive directors, general program assistants and other county employees deserve special recognition for their efficient and courteous service to Nevada farmers and ranchers.

 Allen G. McCrodan, District Director

Frenchy Montero presents outstanding county office award to Bert Gandolfo as witnessed by county committeemen (1 to r) Donald Palmore, George Brown, Albert Smith, Calvin Chism, Albert Fuller and Floyd Fletcher.

COUNTY COMMITTEE ELECTIONS

All Nevada counties are considered one-community counties. The community committee elected becomes the county committee. In Nevada all elections are conducted by mail ballot. The committeemen elected took office at the beginning of October, 1970. The nominee who received the greatest number of votes was elected as a regular committeeman for a three-year term of office. The next two nominees receiving the second and third largest number of votes were elected alternate committeemen for the year. Usually two members of the committee are carried over as members of the regular committee for one or two years depending upon the years remaining in their term of office. At an organizational meeting, the county committee determined the chairman, vice chairman and member of the committee.

Following is a list of the Nevada ASC county committeemen elected in 1970 and the locations of ASCS offices.

CHURCHILL COUNTY ASCS OFFICE

Federal Building
P. O. Box 830
Fallon, Nevada

Thomas Robert Harris

County Executive Director

Eligible Voters: 933

Ballots Cast: 325

CHURCHILL COUNTY ASC COMMITTEE

Orval Fowler	Chairman
Henry Osgood	Vice Chairman
Robert Ansotegui	Regular Member
Donald Weishaupt	1st Alternate
Ted Workman	2nd Alternate
Charles R. York	Ag. Ext. Agent

CLARK-NYE COUNTY ASCS OFFICE

Federal Building, Room 1-634
300 Las Vegas Boulevard, So.
Las Vegas, Nevada 89101

James I. Lee

County Executive Director

Eligible Voters: 270

Ballots Cast: 91

CLARK COUNTY ASC COMMITTEE

H. Merrill Bunker	Chairman
Karl E. Marshall	Vice Chairman
Paul M. Ozaki	Regular Member
Max Hafen	1st Alternate
Dee M. Hughes	2nd Alternate
Ferren W. Bunker	Ag. Ext. Agent

COUNTY OFFICE ADMINISTRATIVE FUNDS FOR THE 1970 CALENDAR YEAR

Operating funds are allocated to county committees and county offices each fiscal year. Allocations for administrative expenses are issued to county offices on a workload system developed to determine funding and staffing. County offices are required annually to report the number of units accomplished during the past year. The number of units to be performed in the next year is estimated. The cost of accomplishing actual units to be performed in the past year is projected for estimated units to be performed in the next year. The average cost of each weighted workload unit is used to determine the funds and staffing needed in the next fiscal year. Weights for workload units are computed by using 160 verification county offices in 48 states. Verification county offices report the time used to complete a unit indicator for each program administered. The weighted unit is then used to determine the average cost of performing the work.

Initial allocations issued to county offices from the workload system are adjusted for combination county factors and from the State reserve for travel where large distances are required to administer programs and attend committee meetings.

Beginning July 1, 1970, all ASCS county offices were phased into the automatic data processing of administrative operations. The administrative ADP system consists of input and output data entered for every employee. Collections and checks for each county office bank account are optically scanned and computed by second generation computers each bi-weekly pay period. ADP printouts are released to county offices for review and reconciliation. Quadweekly printouts are issued to State and county offices for each two pay periods to summarize expenditures on a cumulative basis relative to county office allocations and limitations.

County offices are listed by the parent county committee and the other county committees for combination county offices are listed below. The adaptations of the ADP system does not list administrative expenses for each county committee. Three California county committees (Alpine, Inyo, and Mono) are served by the Gardnerville ASCS Office.

5/ Includes administrative costs for Washoe and Storey Counties.

THE 1970 AGRICULTURAL CONSERVATION PROGRAM

The Agricultural Conservation Program encourages farmers and ranchers to carry out needed soil, water, woodland and wildlife conservation practices and abate farm related pollution. Through this voluntary program, the Federal government shares with the private land owner, the cost of performing the needed conservation measures. The objective of this program is to insure a productive agricultural industry and better environment for future generations.

The Agricultural Conservation Program has long led the way in the abatement of pollution of and from our agricultural lands. The numerous erosion control structures and acres of grass and trees planted under the program have played the major part in helping keep our streams, rivers and lakes clean and our air fresh. Drainage projects have removed polluted ground water to provide a clean environment free of disease and insects. New practices are continually being developed under the program to aid in the accelerated fight against air and water pollution. In 1970, new practices were offered to manage animal waste to abate pollution.

Everyone, rural and urban people alike, gain from the conservation practices offered under ACP. In addition to pollution abatement, the ACP offers livestockmen assistance for range improvement practices such as cross fencing, grass seeding and livestock water facilities. It provides practices such as land leveling, ditch lining, reorganizing irrigation systems and noxious weed control to row crop, hay and grain farmers. It provides more abundant wildlife for sportsmen and naturalists through practices to build reservoirs, farm ponds, shallow water areas and to produce food and habitat for fish and wildlife. Beautification conservation practices provide scenery appealing to the traveler's eye.

The Agricultural Conservation Program is a partnership in conservation. This partnership is helping to provide future generations with a productive agricultural industry and a clean environment.

1970 ACP SPECIAL PROJECTS

The Agricultural Conservation Program provides for the development of special projects to encourage the performance of needed conservation and pollution abatement measures. Under the special project concept, deviation from regular program provisions such as increased cost-share rates or development of new practices is permitted to encourage farmers to carry out the needed work. Other federal, State and local agencies and organizations are also encouraged to join with the farmers and ASCS. Through ACP special projects, emphasis is placed on solving community wide conservation problems which provide greater public benefits.

The State committee reserved a portion of its 1970 ACP allocation which was allocated to counties for the following special projects:

SPECIAL ACP PROJECTS

TOTAL		47	\$ 21,127	10,493

1970 EMERGENCY CONSERVATION MEASURES

The regular Agricultural Conservation Program is supplemented by Public Law 85-58. This law allows the Secretary of Agriculture to assist farmers and ranchers perform emergency measures to restore farmland damaged by natural disaster. Upon the recommendations of county and State disaster committees (representatives of ASCS, Farmers Home Administration and the Extension Service), the Secretary can provide cost-sharing, up to 80 percent of the cost, for the needed restoration measures. The law also provides technical services to insure the emergency conservation measures are adequate.

in 1970, Washoe County was the only county declared a disaster area and eligible for PL 85-58 funds. These funds were provided to enable farmers to remove debris deposited by floodwaters in the Hualapai Valley area in the spring of 1969. Farmers were unable to complete the debris removal in 1969, therefore, the emergency program was extended to 1970.

1970 WHEAT PROGRAM

The 1970 wheat program was aimed at strengthening our Nation in world markets by bringing production of wheat in line with anticipated domestic and export needs. To achieve this, a national wheat allotment of 45.5 million acres was established as compared with the 51.6 million acre allotment in 1969.

To qualify for program benefits, participants were required to divert an acreage equal to 30.3 percent of their farm wheat allotments to a conserving use. No payment was made to participants for this required diversion. However, producers could elect to divert additional acreage from wheat production for payment.

Participation in the program was voluntary. Any producer with an allotment could participate and earn program benefits by meeting the mandatory diversion requirement and planting wheat within the permitted acreage. Program benefits included:

Diversion payments equal to the additional acreage diverted from wheat production times the farm projected wheat yield times \$0.60 per bushel. Farmers could elect to divert up to 50 percent of their allotments for payments. Farms with small allotments (19.2 acres or less) could divert the entire wheat allotment for payment. The permitted acreage, which could be planted to wheat were reduced acre for acre by the additional diversion.

Marketing certificate payments based on the acreage planted to wheat up to 48 percent of the allotment times the farm projected yield times \$1.57 per bushel. The value of the marketing certificates (\$1.57 per bushel) was based on the difference between the July 1 parity price and the national loan rate of \$1.25 per bushel.

Price support loans for the farms wheat production times \$1.20 per bushel. Loans are made to enable the producer to have operating funds while storing the crop to take advantage of the highest market price.

1970 FEED GRAIN PROGRAM

The basic provisions of the 1970 feed grain program were essentially the same as those for 1969. Three feed grains were included under the program - corn, grain sorghum and barley. Participation in the program was voluntary and producers on farms with one or more of the feed grain bases were eligible to earn program benefits.

To take part in the 1970 program, producers were required to divert 20 percent of the farm feed grain base to a conserving use. Producers with bases of 25 acres or less could divert any portion up to the base for payment. On farms with feed grain bases of between 25 and 125 acres, producers could elect to have bases temporarily reduced to 25 acres. The entire temporarily reduced base of 25 acres could then be diverted for payment. Other farms could divert up to 50 percent of their feed grain bases for payment. The diversion payment was based on 40 percent of the total county support rate times the yield times the acres diverted.

Price support payments were made on acreage planted to feed grains which did not exceed the farm base less the acres intended for diversion. The price support payment was computed by multiplying the acres credited for price support by the farm projected yield by the applicable rate: corn, 30 cents per bushel; grain sorghum, 29.68 cents per bushel; and barley, 20 cents per bushel.

Price support loans and purchases were available to producers who qualified for price support payments. The rates for Nevada were \$1.52 per cwt for grain sorghum; \$1.27 per bushel for corn and 87 cents per bushel for barley.

REFERENDUM

Two referendums were held in Nevada for the 1970 program year. Referendums are conducted to determine if producers favor certain mandatory ASCS program provisions. A mandatory program provision cannot be put into effect without the approval of at least two-thirds of the producers voting in a national referendum.

Upland Cotton Marketing Quotas. In December 1969, a referendum was held to determine if cotton farmers favored marketing quotas for the 1970 upland cotton crop. Under a quota program, producers are penalized for acreage planted in excess of their effective farm allotment. Voting was done by mail and all producers sharing in the 1969 upland cotton crop or having a 1969 upland cotton allotment were eligible to vote. Results of the referendum were:

COTTON MARKETING QUOTA REFERENDUM

COUNTY	YES VOTES	NO VOTES	CHALLENGED BALLOTS	TOTAL VOTES	% YES VOTES
Clark	1	0	0	1	100
Nye	16	2	1	18	89
TOTAL	17	2	1	19	89.0

Upland Cotton Allotment Transfers. In May of 1969, a referendum was held to determine if producers favored permitting "out of county" transfers of upland cotton allotments. A two-thirds favorable vote would allow producers to sell or lease their cotton allotments to farmers in other counties within the same State. Results of this referendum were:

COTTON ALLOTMENT TRANSFER REFERENDUM

COUNTY	YES VOTES	NO VOTES	CHALLENGED BALLOTS	TOTAL VOTES	% YES VOTES
Clark	1	0	0	1	100
Nye	13	7	0	20	65
TOTAL	14	7	0	21	66.7

As a result of this referendum, producers in Clark County could transfer 1970 upland cotton allotments to Nye County producers by sale or lease. Producers in Nye County could not transfer allotments by sale or lease to producers in other counties.

1970 UPLAND COTTON PROGRAM

The 1970 upland cotton program was designed to increase production since the cotton supplies were the lowest they have been in many years. Abnormal weather and insect infestations in recent years was responsible for the low carry-over of cotton. The national allotment was 17 million acres in 1970, an increase of 1 million acres from 1969.

Producers participating the program could plant the entire effective allotment since there was no provision for diversion payments and no required diverted acreage. Price support payments of 16.80 cents per pound was made on the farm's projected yield multiplied by the domestic allotment, or the planted acreage if it was less than 90% of the domestic allotment. The domestic allotment was 65% of the effective allotment for the farm.

By participating in the program, Nevada producers were eligible for price support loans of 19.60 cents per pound for middling 1-inch cotton on their entire cotton production.

Marketing quotas were in effect for the 1970 crop, having been approved by 96% of the producers voting in a referendum December 1-5, 1969. With quotas in effect, producers would be subject to penalty for cotton planted in excess of their allotments. There were no marketing quota penalties assessed in Nevada for 1970.

Program provisions allowed producers to transfer allotments to other producers by sale or lease. Growers could also release allotments to the county committee. This released acreage was apportioned to other growers requesting additional acreage.

1970 PRICE-SUPPORT PROGRAMS

Price-support programs are designed to (1) help assure stability of farm income and prices, (2) assist in bringing about a better balance between production and consumption and (3) assist farmers in the orderly marketing of crops. Under these programs, eligible producers are assured of price assistance for a commodity meeting eligibility requirements regardless of fluctuations in the market price. The price-support operations are administered by ASCS and financed by Commodity Credit Corporation. Two support methods were used in Nevada during 1970 - loans and payments.

1970 Price-Support Loans

Price-Support Loans were available to producers for wheat, corn, grain sorghum, barley, oats, cotton, honey and many other commodities not produced in Nevada. Some of these commodities were also eligible for resale, which is an extension of the loan beyond the maturity date.

Loans permit eligible producers to hold their harvested crops to take advantage of possible increases in market prices. A loan can be repaid with interest when the crop is sold, or the crop under loan can be delivered to CCC, thus satisfying the loan. A producer with a loan is assured of receiving at least the loan price for the crop.

Loans are also available to help producers finance new facilities needed to store crops eligible for price support. These loans are for up to five years and are repaid in four annual installments

Price-Support Payments - Wool Program

The National Wool Act of 1954, as amended, provides that support of the price for wool may be carried out through annual incentive payments to producers. The program is designed to encourage domestic production at a yearly level of 300 million pounds of shorn wool. This policy was established by Congress as a measure for our national security and in promotion of the general economic welfare. The total amount of payments under the Act is limited to 70 percent of the accumulated totals of duties collected on imports of wool and wool products.

The payment rate of 102.8 percent for 1970 was the percentage needed to bring the average price of 35.5 cents received by growers for wool sold during the marketing year up to the previously announced level of 72 cents per pound of shorn wool. A payment of \$1.46 per hundred pounds of unshorn lambs sold was also made. This payment was established at a level in relationship to the payment for shorn wool. Unshorn lamb payments were made to avoid unusual shearing prior to marketing in order to obtain the payments on shorn wool.

Wool growers are authorized to organize and conduct advertising and sales promotion activities, financed by deductions from their payments. An agreement between the Secretary and the American Sheep Producers Council, which was approved in a producer referendum, is designed to improve the demand for wool and lamb products in the free market.

Douglas - 24,414 pounds

COMPLIANCE

The success of all ASCS farm programs depends on participants complying with program regulations and acreage requirements. County ASCS committees and office personnel have the responsibility of determining program compliance.

ACP Spot Checks: ASC county committees determine compliance for all conservation practices under the Agricultural Conservation Program for which the Soil Conservation Service or Nevada Division of Forestry is not assigned the technical responsibility. A minimum of 5 percent of these practices must be spot checked by ASCS personnel. ASCS representatives are also responsible for insuring that all ACP conservation practices are maintained in accordance with program policy. Vendors providing conservation materials and services are also subject to spot checks.

Compliance by Certification: The farmer certification program was approved in 4 counties during the 1970 program year. Churchill, Humboldt and Pershing counties were approved for wheat and feed grain and Nye County was approved for cotton, feed grain and wheat. The responsibility for complying with bases, allotments and diverted acreage lies with the farmer. The farmer has the responsibility of reporting to the county office his acreages and other program compliance provisions. County office personnel spot check 25% of the reporting farms to insure program provisions are met.

Regular Compliance: In counties not approved for the certification program, county office employees performed the compliance work. Visits were made to each farm participating in a program and reporters measured wheat, feed grain, cotton and diverted acreages.

Measurement Service: Measurement service was offered in all Nevada counties. This service includes measuring and staking areas before planting, measurement of land after planting, or measurement for any program purpose the farmer requests. Measurement service assures the participant that program acreage provisions will be met, and eliminates the need for acreage adjustments after planting.

The entire cost of the measurement service is paid for by the producer. Measurement service is very important to producers in counties approved for the farm certification program.
